

LIANOL: THE NATURAL START!

BASDIAR IS PART OF THE LIANOL 5 STEP PIG CONCEPT

①	②	③	④	⑤
FERTILITY sow	FARROWING sow	BIRTH piglet	FARROWING PEN piglet	WEANING piglet
Higher farrowing rate and uniform piglets	Smooth birth of vital, heavier piglets	Energy and activation of the immune system right after birth	Good gut development and digestion from day one are important	Favors gut function around weaning

Lianol 5 step Pig Concept is an innovative feed approach from Ardol.

FARROWING HOUSE

GOOD GUT DEVELOP-
MENT AND GOOD
DIGESTION FROM DAY
ONE ARE IMPORTANT

GOOD PROTECTION AND RAPID GUT DEVELOPMENT

The clay minerals and algae promote the piglets' rooting behaviour.

Colostrum and sow milk are the best and cheapest feed for a piglet. Essential for smooth development. It is also important that the piglets' gut is prepared for weaning. Lianol basdiar has been developed specifically for this purpose.

Lianol basdiar is a natural, tasty, non-perishable pig feed. A supplement to sow's milk, which quickly teaches EVERY piglet to eat plant-based feed through natural rooting behaviour. It contains typical ingredients that bind the pathogenic germs and contribute to a swift gut development. The high iron and mineral levels are an excellent addition to colostrum and milk, providing a better growth.

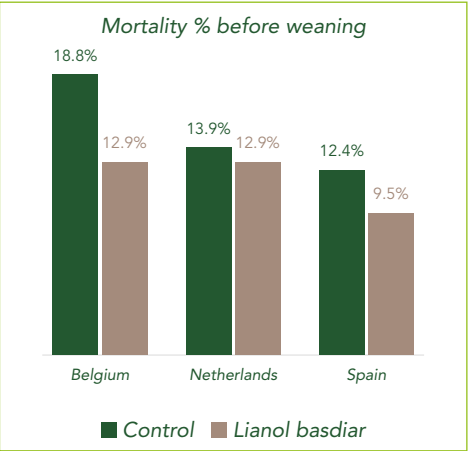

Lianol basdiar not only promotes good gut development but also contributes to a more efficient digestion. Through support of the immune system, it also provides good protection against digestive disturbances. Because the piglets eat Lianol basdiar so well, they stay hydrated. This is extremely important, especially in the first days in life.

Lianol basdiar in the first week of life:

- learns piglets to eat more easily
- prepares the gut for plant-based feed
- reduces mortality before weaning
- binds endotoxins and is a natural source of iron
- provides good gut protection

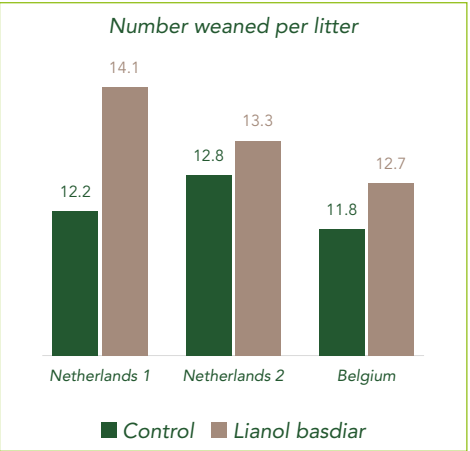

LIANOL BASDIAR; THE MOST IMPORTANT STEP TO CAREFREE WEANING

Lower mortality

Measured variable: BE: 683 NL: 21,958; ES: 29,312

More weaned piglets

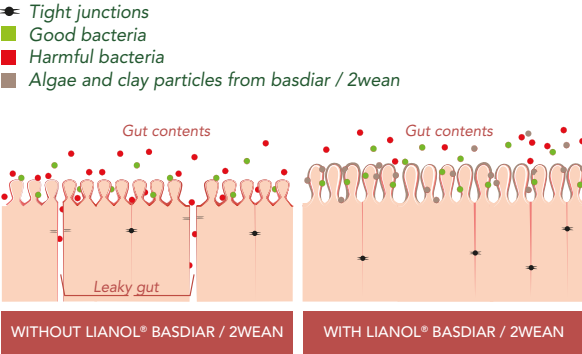

Measured variable: NL1: 16,198; NL2: 32,017; BE: 683

Clay minerals and algae

Lianol basdiar and Lianol 2wean contain clay minerals, algae, dextrose, iron and selenium among others. These ingredients ensure a fast development of the small intestines and better digestion. In part because algae and clay particles form a protective layer on the intestinal villi. Pathogenic bacteria are captured and leave the body via the faeces before they can be harmful.

USE OF LIANOL BASDIAR

Lianol basdiar is a powder that is mixed with water.

Use:

- Day of birth: 200 ml solution per litter per day (dose: 100 g in 1 litre of lukewarm water).
- Day 2-7: slowly increase the volume to max. 1 litre per litter per day.
- Day 7-10: Mix Lianol basdiar with increasingly more creep feed; allow feed bowl to be emptied daily.
