

Instructions of use

Using exclusively after the use of Lianol basdiar

I - Which piglets?

- All piglets and all litters

II - What to do before weaning

- Start by adding Lianol 2wean concentrate to the feed from day 8 after birth till weaning.
- Make sure to have a gradual transition between lianol basdiar and a lianol 2wean feed.
- Have both a prestarter and starter feed for achieving the best results. Both with 2wean concentrate added.
- Pay attention to the flow of the drinking nipple in the farrowing pen.

III - What to do after weaning

- Add Lianol 2wean to a starter feed from weaning till 10 days after.
- Switch to the original starter feed at 10 days after weaning.
- Make sure there is fresh and accessible drinking water in the nursery.

Lianol 2wean

Lianol 2wean is een concentrate that is added to the feed at a ratio of 2 á 3 %. This is possible at the feeding mill or in a manual way as a topdressing.

To achieve optimal results it is best to have gradual transitions between the different types of feed. It is also best to have 2 types of feed with Lianol 2wean in this period (prestarter and starter feed) Ideal, the transitions take place 2 days before or after weaning.
