

B. Instructions for use nursery

In order to achieve an optimal effect, always start with administering Lianol basdiar in the farrowing pen.

I - Which piglets?

- The 10% lower segment of the weaned piglets
- All piglets with a weakened general health

II - What to do straight after weaning

Place all the weakened and small piglets in the same pen(s).

The product is preferably presented as a solution with water (30°C).
Dissolve BASDIAR in water - The ideal solution is 10% (100g per 1L water).

Dosage per piglet per day: 10g of dry BASDIAR or 100ml 10% solution.
Duration of treatment: 10 days starting the day of weaning

Like this piglets quench their thirst with ease and start to eat faster.
Administering basdiar in its dry form as a topdressing over the feed is also possible.

Point of attention after weaning: the flow of the nipples - piglets have to drink with ease!
