

A. Instructions for use farrowing pen

I - Which piglets?

- All piglets and all litters immediately after birth.

II - What to do immediately after birth

- Dissolve 100g of BASDIAR in 1L of water (lukewarm 30 °C).
- Start with 200 ml solution per litter and systematically replenish according to uptake.
- Administer while stirring because the product settles quickly.
- Use clean materials.

III - What to do from day 2 till day 7

- Increase the volume of the solution offered up to maximum 1L / litter / day.
- Present the solution always with a minimum of 1 cm of water on top.
- Administer while stirring because the product settles quickly.
- Daily cleaning of the feeding bowls is not necessary until day 7. (Microbiologically safe product).

IV - What to do from day 7 till day 10

- Systematic mixing of solid feed into the basdiar solution.
- Day 7: 80%-20% Day 8: 50%-50% Day 9: 20%-80% Day 10: 100% solid feed.
- Offer fresh food daily! (start early - many times - as much as possible)
- Pay attention to the flow of the drinking nipple.

(Do NOT administer basdiar in the piping system of feeding systems for young piglets. (Nutrix, TeWe, BD... - in the feeding bowl itself, it is allowed)
