

# Instructions of use

Lianol Solapro is the basic form of Lianol and meant to be mixed into the feed

## I - Which sows?

- All sows

## II - In the function of boosting fertility (as Lianol ferti)

- A: Mixed into the lactation feed at a ratio of 1kg/mTon
- B: Mixed into the flush feed at ratio of 2.5kg/mTon
- C: Mixed into the gestation feed (till day 28) at 2kg/mTon

Make an analysis of the fertility of the sows per parity on the farm.  
Pay attention to: condition of sow - breeding moment - light - boar

## III - In the function of boosting birth weight and/or milk production (as Lianol vital)

- D: Mixed into pre-farrowing feed at 1.5kg/mTon

Pay attention to the use of oxytocin, prevent stress and provide enough fresh water.
